each year brings to light new scientific discoveries that have the power to either test our faith or strengthen it most recently the news that scientists have created artificial life forms in the laboratory if humans can create life what does that mean for the creation story found in scripture biochemist and christian apologist fazale rana for one isn't worried in creating life in the lab he details the fascinating quest for synthetic life and argues convincingly that when scientists succeed in creating life in the lab they will unwittingly undermine the evolutionary explanation for the origin of life demonstrating instead that undirected chemical processes cannot produce a living entity

the second world war is often seen as a period of emancipation because of the influx of women into paid work and because the state took steps to relieve women of domestic work this study challenges such a picture the state approached the removal of women from the domestic sphere with extreme

caution in spite of the desperate need for women's labour in war work women's own preferences were frequently neglected or distorted in the search for a compromise between production and patriarchy however the enduring practices of paying women less and treating them as an inferior category of workers led to growth in the numbers and proportions of women employed after the war in many areas of work penny summerfield concludes that the war accelerated the segregation of women in inferior sectors of work and inflated the expectation that working women would bear the double burden without a redistribution of responsibility for the domestic sphere between men women and the state first published in 1984 this is an important book for students of history sociology and women's studies at all levels

the evolution of morphological novelties i.e. anatomical structures unique to a taxonomic group is generally associated with changes in developmental mechanisms tunicates the closest relatives of vertebrates have historically had a great conceptual impact on our understanding of the rules that guide a developmental program a broad range of studies have addressed how developmental genes or molecular networks contributed to the evolutionary transition from invertebrates to vertebrates and to the morphological radiation of tunicates in addition tunicate species display several traits of evolutionary interest e.g. solitary or colonial habitus conservative anatomy high genetic polymorphism cryptic speciation different developmental pathways sexual and asexual development whole body regeneration to name a few therefore they offer unique experimental models for exploring levels of evolutionary divergence in developmental programs behind alternate body plans and for obtaining insight regarding the embryological and evolutionary mechanisms that generate animal diversity the increasing amount of available tunicate genomes and expression data now make feasible efforts to distinguish between homologous convergent or superficially similar gene networks recent evidence indicating that in tunicates there is great variability in the molecular genetics underlying specific characters of interest or developmental programs makes it fundamentally important to reveal which genes or gene modules determine functional and morphological homology moreover the availability of sophisticated techniques of live imaging coupled with facs sorting cell transplantation and transgenic cell labelling make tunicates excellent models for the study of stem cells and their evolutionary traits
