lead to erroneous calculations Example Departure KLAX Los Angeles Arrival KSAN San Diego

## 2 Route Planning

AvFacts allows you to select your preferred route either by selecting waypoints directly on the map or by using airways Carefully review the route for obstacles and airspace restrictions

## 3 Weather Briefing

Access realtime weather data METARs and TAFs for your departure and destination airports as well as along your planned route Analyze this data to assess weather conditions and potential hazards Pay close attention to wind visibility and cloud cover

## 4 Performance Calculations

AvFacts may incorporate performance calculators Input aircraft details weight fuel etc to obtain estimates for takeoff and landing distances Compare these calculations to runway lengths at your departure and arrival airports

## 5 Weight and Balance

Enter passenger and cargo weights to calculate the aircrafts center of gravity Ensure the calculated center of gravity falls within the aircrafts operational limits as shown in the aircrafts POH Pilot Operating Handbook

## 6 Fuel Planning

Calculate your required fuel considering factors like flight time reserve fuel requirements and potential diversions Always account for a sufficient fuel reserve

## 7 Generate Flight Plan

Once you have completed all necessary inputs AvFacts will generate a comprehensive flight plan including details such as flight time fuel consumption and route information

## 8 Review and Adjust

Carefully review the generated flight plan for any discrepancies or inconsistencies Make necessary adjustments to ensure the plan is safe and compliant with regulations

# III Best Practices and Common Pitfalls
