shorn of all subtlety and led naked out of the protective fold of educational research literature there comes a

sheepish little fact lectures don't work nearly as well as many of us would like to think. George Cobb (1992) this book contains activities that guide students to discover statistical concepts, explore statistical principles, and apply statistical techniques. Students work toward these goals through the analysis of genuine data and through interaction with one another, with their instructor, and with technology. Providing a one-semester introduction to fundamental ideas of statistics for college and advanced high school students, *Workshop Statistics* is designed for courses that employ an interactive learning environment by replacing lectures with hands-on activities. The text contains enough expository material to stand alone, but it can also be used to supplement a more traditional textbook. Some distinguishing features of *Workshop Statistics* are its emphases on active learning, conceptual understanding, genuine data, and the use of technology. The following sections of this preface elaborate on each of these aspects and also describe the unusual organizational structure of this text.

This first edition focuses on probability and the Bayesian viewpoint. It presents basic material on probability and then introduces inference by means of Bayes' rule. The emphasis is on statistical thinking and how one learns from data. The objective is to present the basic tenets of statistical inference in a unique format. The text allows students to discover statistical concepts, explore statistical principles, and apply statistical techniques. In addition to the numerous activities and exercises around which the text is built, the book includes a basic text exposition for each topic and data appendices.

Advance vocabulary for students in grades 5-6 using vocabulary daily skill builders. This 96-page book features two short reproducible activities per page and includes enough lessons for an entire school year. It covers topics such as defining, relating, classifying, writing, expressing opinions, and applying vocabulary words. Frequent reviews provide practice in a standardized test format. The activities align with state standards, and the book includes a matrix for selected states.

This manual of activities is written for support staff, the unsung heroes and heroines of organizations who often are the ones for whom there is no training budget or who can not be spared from their work to spend time in training. The book presents a wide range of activities and handouts to help teach and apply the most critical competences for administrative, secretarial, and support professionals. Titles include: Delivering bad news, getting my point across, proud to be part of the team, and getting organized. It covers all here. Each activity description includes: target group, objectives, number of participants, time, materials, important notes for the trainer.
