information usually comes in pieces from different sources it refers to different but related questions therefore information needs to be aggregated and focused onto the relevant questions considering combination and focusing of information as the relevant operations leads to a generic algebraic structure for information this book introduces and studies information from this algebraic point of view algebras of information provide the necessary abstract framework for generic inference procedures they allow the application of these procedures to a large variety of different formalisms for representing information at the same time they permit a generic study of conditional independence a property considered as fundamental for knowledge presentation information algebras provide a natural framework to define and study uncertain information uncertain information is represented by random variables that naturally form information algebras this theory also relates to probabilistic assumption based reasoning in information systems and is the basis for the belief functions in the dempster shafer theory of evidence

this volume contains papers presented at the third international workshop on visual form it covers the most important topics of current interest in the field presenting an updated collection of results achieved by leading academic and industrial research groups from several countries the book contains invited lectures and research papers dealing with theoretical and applicative aspects of shape perception representation decomposition description and recognition as well as related topics

kads is a structured methodology for the development of knowledge based systems which has been adopted throughout the world by academic and industrial professionals alike kads approaches development as a modeling activity two key characteristics of kads are the use of multiple models to cope with the complexity of knowledge engineering and the use of knowledge level descriptions as an immediate model between system design and expertise data the result is that kads enables effective kbs construction by building a computational model of desired behavior for a particular problem domain kads contains three section the theoretical basis of kads languages and tools and applications together they form a comprehensive sourcebook of the how and why of the kads methodology kads will be required reading for all academic and industrial professionals concerned with building knowledge based systems it will also be a valuable source for students of knowledge acquisition and kbs special features kads is the most widely used commercial structured methodology for kbs development in europe and is becoming one of the few significant ai exports to the us describes kads from its theoretical basis through language and tool developments to real applications

this is the proceedings of the 11th international workshop on structural and syntactic pattern recognition sspr 2006 and the 6th international workshop on statistical techniques in pattern recognition spr 2006 held in hong kong august 2006 alongside the conference on pattern recognition icpr 2006 38 revised full papers and 61

revised poster papers are included together with 4 invited papers covering image analysis character recognition bayesian networks graph based methods and more

nonmonotonic reasoning is a discipline of computer science epistemology and cognition it models inferences where classical logic is inadequate in symbolic ai defines normative models for reasoning with defeasible information in epistemology and models human reasoning under information change in cognition its building blocks are defeasible rules formalised as definetti conditionals in this thesis christian eichhorn examines qualitative and semi quantitative inference relations on top said conditionals using the conditional structure of the knowledge base and spohn s ordinal conditional functions using established properties converting network approaches from probabilistics he shows how to approach the relations with regard to implementation

it has long been a favourite tenet of mine and there are now i think others who hold it that insanity is no exception to the rule which requires a knowledge of the normal as an indispensable preliminary to a knowledge of the abnormal the reason why the contrary opinion has been maintained with such vigour and the contrary practice so generally followed has seemed to me to be the absence of any work in which normal psychological processes are dealt with from the point of view and for the purposes of the alienist of the many excellent works on psychology which are at the service of the student there is none that affords him material help in understanding the nature of those disorders of mind which it is the work of his life to study for instance the chief labours of the student of the disordered mind are concerned with the existence and nature of delusion but as far as i know no work on normal psychology gives him any help in settling the preliminary questions of what a delusion is of how it differs from a normal state of mind of its mode of origin or of its varieties it is true that these are not questions in normal psychology and it is no reproach to the psychologist who deals with the normal

alone that they are excluded from his purview but it is a great disadvantage to the alienist to be left without guidance in the face of problems of such profound importance to him
