zoölogy is the science of animals this was the definition centuries ago when zoölogy was almost exclusively the classification and naming of animals since that time there has arisen a vast body of doctrine concerning modes of life life processes inter relations of animals development distribution and descent most of which has little bearing on classification which is now founded upon principles as basic as those underlying other branches of science for the purposes of this volume anything that has to do with animals is part of zoölogy this book is in practice one long definition of zoölogy it includes morphology physiology ecology zoögeography paleontology taxonomy and evolution as part of the zoölogical sciences this book being a general discussion will contain elementary facts and principles from each of these branches of science students should find it a useful exercise to stop and reflect which of the divisions of zoölogy are at any given moment actually being studied

professor margaret archer is a leading critical realist and major contemporary social theorist this edited collection seeks to celebrate the scope and accomplishments of her work distilling her theoretical and empirical contributions into four sections which capture the essence and trajectory of her research over almost four decades long fascinated with the problem of structure and agency archer s work has constituted a decade long engagement with this perennial issue of social thought however in spite of the deep interconnections that unify her body of work it is rarely treated as a coherent whole this is doubtless in part due to the unforgiving rigour of her arguments and prose but also a byproduct of sociology s ongoing compartmentalisation this edited

collection seeks to address this relative neglect by collating a selection of papers spanning archer s career which collectively elucidate both the development of her thought and the value that can be found in it as a systematic whole this book illustrates the empirical origins of her social ontology in her early work on the sociology of education as well as foregrounding the diverse range of influences that have conditioned her intellectual trajectory the systems theory of walter buckley the neo weberian analysis of lockwood the critical realist philosophy of roy bhaskar and more recently her engagement with american pragmatism and the italian school of relational sociology what emerges is a series of important contributions to our understanding of the relationship between structure culture and agency acting to introduce and guide readers through these contributions this book carries the potential to inform exciting and innovative sociological research

as to method of treatment it has seemed convenient to treat each part with some exceptions by writing a general discussion of the subject and following this discussion with detailed laboratory descriptions of types of the tissue abundantly illustrated with good pen and ink drawings such concrete examples have been selected from readily accessible materials in most cases and the proper procedure for securing and preparing the materials has been indicated in small type at the end of each chapter in many cases in the last part of the book a chapter on technique will be found giving a short statement of principles and a guide for some concrete practice in some chapters the seminar work is not separated from the statements of principles
