this book promises to be pivotal in the current debate about how and why early hunting and gathering peoples adopted domesticated plants. It offers a new model to explain the decision making process that led to this adoption, a model hinging on the argument that the critical value of early domesticated plants was not their productivity but their predictability.

1864 was the last critical year of the civil war for the union and perhaps no other event was as critical as abraham lincoln's reelection. The united states had never seen an internal crisis of the civil war's magnitude and some northerners doubted that holding a presidential election in the midst of such internal division was even appropriate. Lincoln however recognized that conducting a national election was both symbolic and necessary in a war that tested whether a nation conceived in liberty could long endure. Indeed, Lincoln's election as president in 1860 had been the initial spark for secession and his belief that breaking up the nation simply because a presidential election did not turn out the way a particular state desired was the essence of anarchy. So the 1864 election came and the fate of the nation potentially hung in the balance. Nineteenth century elections were not like those today; few politicians actively campaigned for themselves and instead stood for office, letting others speak for them. Thus Lincoln did not stump much in the summer or fall of 1864 and left such duties to other republicans. However, the reelection campaign influenced almost every aspect of the presidency, including the conduct of the war. Whatever issue Lincoln confronted, he always had an eye toward how it would affect his chances in november. This collection of letters to and by Lincoln illuminates the various aspects of his administration and how they influenced or were influenced by the election process.

the agricultural revolution in prehistory addresses one of the most debated and least understood revolutions in the history of our species: the change from hunting and gathering to farming. Graeme Barker takes a global view and

integrates a massive array of information from archaeology and many other disciplines including anthropology botany climatology genetics linguistics and zoology against current orthodoxy barker develops a strong case for the development of agricultural systems in many areas as transformations in the life ways of the indigenous forager societies and argues that these were as much changes in social norms and ideologies as in ways of obtaining food with a large number of helpful line drawings and photographs as well as a comprehensive bibliography this authoritative study will appeal to a wide general readership as well as to specialists in a variety of fields
