1 basic concepts of interactive theorem proving interactive theorem proving ultimately aims at the construction of powerful reasoning tools that let us computer scientists prove things we cannot prove without the tools and the tools cannot prove without us interaction typi cally is needed for example to direct and control the reasoning to speculate or

generalize strategic lemmas and sometimes simply because the conjecture to be proved does not hold in software verification for example correct versions of specifications and programs typically are obtained only after a number of failed proof attempts and subsequent error corrections different interactive theorem provers may actually look quite different they may support different logics first order or higher order logics of programs type theory etc may be generic or special purpose tools or may be targeted to different applications nevertheless they share common concepts and paradigms e.g. architectural design tactics tactical reasoning etc the aim of this chapter is to describe the common concepts design principles and basic requirements of interactive theorem provers and to explore the bandwidth of variations having a person in the loop strongly influences the design of the proof tool proofs must remain comprehensible proof rules must be high level and human oriented persistent proof presentation and visualization becomes very important
