this collection shows how the marginal territory of the water s edge has been represented in art in different places at various times and how such art contributed to the formation of cultural and national identities essays explore visual cultures of the jordan and vltava rivers the south african seaside resort of durban post hurricane katrina new orleans and the french riviera among other margins of river and sea

foundations of sensation and perception offers a comprehensive and accessible introduction to the science of sensation and perception it covers all the human senses and answers many questions such as why movies are so convincing how ventriloquism works why things sound different as you get older and why you may feel ill in an aircraft or sea vessel full of illustrations and graphs that bring concepts to life the textbook covers vision hearing

balance touch pain smell and taste it discusses each sensory system through its fundamental neuroscience major perceptual qualities and underlying coding principles each chapter includes reflective questions key terms and information boxes and chapter summaries each chapter ends with a tutorial section which introduces more advanced areas of study in an accessible way including measurement of light and fourier analysis as well as topics outside of the mainstream of sensation including music perception colour deficiencies and phantom limbs the fourth edition of this bestselling textbook includes an extensive update of the text to reflect the latest research a greater focus on balance and the body senses and a major reorganisation of the chapters for ease of use it will be an invaluable resource for a wide range of undergraduate students in psychology neuroscience and related disciplines

assembles a collection of experts to provide a current account of different approaches e g traditional comparative and experimental being applied to study mobility moreover the book aims to stimulate new theoretical perspectives that adopt a holistic view of the interaction among intrinsic i e skeletal and extrinsic i e environmental factors that influence differential expression of mobility since the environment undoubtedly impacts mobility of a wide variety of animals insights into human mobility as a concept can be improved by extending approaches to investigating comparable environmental influences on mobility in animals in general the book teases apart environmental effects that transcend typical categories e g coastal versus inland mountainous versus level arboreal versus terrestrial such an approach when coupled with a new emphasis on mobility as types of activities rather than activity levels offers a fresh insightful perspective on mobility and how it might affect the musculoskeletal system

eukaryotic cilia are evolutionarily conserved microtubule based structures that protrude from the cell surface in vertebrates multiple motile and primary immotile cilia fulfill sensory and motility functions that are critical for embryonic development and the homeostasis of adult tissues cilia malfunction has been shown to cause a growing number of diseases presenting phenotypes such as brain and skeletal developmental problems intellectual disability blindness infertility obesity and kidney cysts despite their clinical relevance we are still far from fully understanding the basic biology of these multiple cilia types for example we do not know the molecular compositions of all types of cilia nor how cilia structural and functional diversity is generated also we are still identifying the genetic causes of ciliopathies and the impact of mutations on ciliary protein function cilia biogenesis maintenance ciliary functions and disease development understanding all these aspects concerning vertebrate cilia will greatly contribute to the design of innovative therapeutic approaches for cilia related disorders understanding the basic biology of vertebrate cilia is critical for the understanding of cilia related disorders however there are still many open questions about these organelles for example we do not know the proteomes and protein protein interaction networks specific of each cilium type also the function of ciliary proteins is often studied mostly in vitro and in the context of primary cilia this limits our possibility to answer questions like why does a certain disease mutation affect only certain types of cilia in specific tissues therefore this research topic aims to address these issues and focus on the latest findings on the basic biology of vertebrate cilia such as their molecular composition and biogenesis pathways and also on advances on our understanding of the molecular mechanisms of ciliopathies the

goal of this research topic is to cover novel research focused on furthering our understanding on the molecular mechanisms underlying the development of cilia associated diseases areas to be covered in this research topic may include but are not limited to identification of novel cilia related diseases genetic causes of ciliopathies molecular mechanisms of disease and development of therapeutic approaches molecular composition of vertebrate cilia molecular mechanisms of vertebrate cilia biogenesis and multiple functions original research articles as well as review articles are welcomed

comprehensive supramolecular chemistry ii second edition nine volume set is a one stop shop that covers supramolecular chemistry a field that originated from the work of researchers in organic inorganic and physical chemistry with some biological influence the original edition was structured to reflect in part the origin of the field however in the past two decades the field has changed a great deal as reflected in this new work that covers the general principles of supramolecular chemistry and molecular recognition experimental and computational methods in supramolecular chemistry supramolecular receptors dynamic supramolecular chemistry supramolecular engineering crystallographic engineered assemblies sensors imaging agents devices and the latest in nanotechnology each section begins with an introduction by an expert in the field who offers an initial perspective on the development of the field each article begins with outlining basic concepts before moving on to more advanced material contains content that begins with the basics before moving on to more complex concepts making it suitable for advanced undergraduates as well as academic researchers focuses on application of the theory in practice with particular focus on areas that have gained increasing importance in the 21st century including nanomedicine nanotechnology and medicinal chemistry fully rewritten to make a completely up to date reference work that covers all the major advances that have taken place since the first edition published in 1996
