exterranean concerns the extraction of stuff from the earth a process in which matter goes from being sub to exterranean by opening up a rich archive of nonmodern texts and images from across europe this work offers a bracing riposte to several critical trends in ecological thought by shifting emphasis from emission to extraction usher reorients our perspective away from earthrise like globes and shows what is gained by opening the planet to depths within the book thus maps the material and immaterial connections between the earth from which we extract the human and nonhuman agents of extraction and the extracted matter with which we live daily eschewing the self congratulatory claims of posthumanism usher instead elaborates a productive tension between the materially situated homo of nonmodern humanism and the abstract and aggregated anthropos of the anthropocene in dialogue with michel serres bruno latour and other interdisciplinary work in the environmental humanities usher shows what premodern material can offer to contemporary theory examining textual and visual culture alike usher explores works by ronsard montaigne and rabelais early scientific works by paracelsus and others as well as objects engravings buildings and the salt mines of wieliczka both historicist and speculative in approach exterranean lays the groundwork for a comparative ecocriticism that reaches across and untranslates theoretical affordances between periods and languages

at what point did machines and technology begin to have an impact on the cultural consciousness and

imagination of europe how was this reflected through the art and literature of the time was technology a sign of the fall of humanity from its original state of innocence or a sign of human progress and mastery over the natural world in his characteristically lucid and captivating style jonathan sawday investigates these questions and more by engaging with the poetry philosophy art and engineering of the period to find the lost world of the machine in the pre industrial culture of the european renaissance the aesthetic and intellectual dimension of these machines appealed to familiar figures such as shakespeare francis bacon montaigne and leonardo da vinci as well as to a host of lesser known writers and artists in the sixteenth and seventeenth centuries this intellectual engagement with machines in the european renaissance gave rise to new attitudes towards gender work and labour and even fostered the new sciences of artificial life and reason which would be pursued by figures such as descartes hobbes and leibniz in the seventeenth century writers philosophers and artists had mixed and often conflicting reactions to technology reflecting a paradoxical attitude between modern progress and traditional values underpinning the enthusiastic creation of a machine driven world then were stories of loss and catastrophe these contradictory attitudes are part of the legacy of the european renaissance just as much as the plays of shakespeare or the poetry of john milton and this historical legacy helps to explain many of our own attitudes towards the technology that surrounds us sustains us and sometimes perplexes us in the modern world

the period from copernicus to newton witnessed a scientific revolution which eventually led to modern science and both built upon and sharply challenged the earlier natural philosophies of the classical world science in europe 1500 1800 a primary sources reader offers a fascinating picture of the world of the scientific revolution through the eyes of those involved this selection of primary sources is geographically inclusive including often neglected areas such as spain scandinavia and central eastern europe and thematically wide ranging illustrating early modern europe s interplay of social cultural and intellectual traditions a key resource for all students and teachers of the history of science malcolm oster s masterly collection offers an introduction to the conceptual and institutional foundations of modern science this volume can be used alongside or independently of its companion volume science in europe 1500 1800 a secondary sources reader also edited by malcolm oster
