this is a modern and elegant introduction to engineering fluid mechanics enriched with numerous examples exercises and applications a swollen creek tumbles over rocks and through crevasses swirling and foaming taffy can be stretched reshaped and twisted in various ways both the water and the taffy are fluids and their motions are governed by the laws of nature the aim of this textbook is to introduce the reader to the analysis of flows using the laws of physics and the language of mathematics the book delves deeply into the mathematical analysis of flows knowledge of the patterns fluids form and why they are formed and also the stresses fluids generate and why they are generated is essential to

designing and optimising modern systems and devices inventions such as helicopters and lab on a chip reactors would never have been designed without the insight provided by mathematical models

a provocative analysis of market based interventions into public problems and the consequences market based interventions have been used in attempts to solve numerous public problems from education to healthcare and from climate change to privacy scholars have responded persuasively through critiques of neoliberalism in can markets solve problems daniel neyland véra ehrenstein and sveta milyaeva propose a different route forward there is no single entity knowable as the market the authors argue instead they examine in detail the devices relations and practices that underpin these market based interventions drawing on recent work in science and technology studies sts each chapter focuses on a different intervention and critically explores the market sensibility around which it is organized trade and exchange competition property and ownership and investment and return all become the focus of a thorough exploration of what it means to intervene in public problems how problems are composed and how solutions are continually reworked can markets solve problems offers the first book length sts enquiry into markets and public problems weaving together rich empirical descriptions and conceptual discussions the book provides in depth insights into the workings of these markets their continuous evolution and the consequences the result is a new avenue of critical inquiry that moves between the details of specific policies and the always emerging collective features of this landscape of intervention
