decades of brain imaging experiments have revealed important insights into the architecture of the human brain and the detailed anatomic basis for the neural dynamics supporting human cognition however technical restrictions of traditional brain imaging approaches including functional magnetic resonance tomography fmri positron emission tomography pet and magnetoencephalography meg severely limit participants movements during experiments as a consequence our knowledge of the neural basis of human cognition is rooted in a dissociation of human cognition from what is arguably its foremost and certainly its evolutionarily most determinant function organizing our behavior so as to optimize its consequences in our complex multi scale and ever changing environment the concept of natural cognition therefore should not be separated from our fundamental experience and role as embodied agents acting in a complex partly unpredictable world to gain new insights into the brain dynamics supporting natural cognition we must overcome restrictions of traditional brain imaging technology first the sensors used must be lightweight and mobile to allow monitoring of brain activity during free participant movements new hardware technology for electroencephalography eeg and near infrared spectroscopy nirs allows recording electrical and hemodynamic brain activity while participants are freely moving new data driven analysis approaches must allow separation of signals arriving at the sensors from

the brain and from non brain sources neck muscles eyes heart the electrical environment etc independent component analysis ica and related blind source separation methods allow separation of brain activity from non brain activity from data recorded during experimental paradigms that stimulate natural cognition imaging the precisely timed distributed brain dynamics that support all forms of our motivated actions and interactions in both laboratory and real world settings requires new modes of data capture and of data processing synchronously recording participants motor behavior brain activity and other physiology as well as their physical environment and external events may be termed mobile brain body imaging mobi joint multi stream analysis of recorded mobi data is a major conceptual mathematical and data processing challenge this research topic is one result of the first international mobi meeting in delmenhorst germany in september 2013 during an intense workshop researchers from all over the world presented their projects and discussed new technological developments and challenges of this new imaging approach several of the presentations are compiled in this research topic that we hope may inspire new research using the mobi paradigm to investigate natural cognition by recording and analyzing the brain dynamics and behavior of participants performing a wide range of naturally motivated actions and interactions

heritage science a cross disciplinary field of study that emphasizes research on cultural interpretation and management has seen significant development in recent years modern technology has opened new innovations and possibilities for scientific cooperation that produces several benefits that affect multiple aspects of this scientific field applying innovative technologies in heritage science is a collection of progressive studies on the methods and applications of the technological implications and scientific advancements within heritage and cultural research to bridge the once unbridgeable gap between science and humanities while highlighting topics including digital archives cultural data and chemical documentation this book is ideally designed for archaeologists museologists conservationists preservationists librarians researchers educators cultural heritage professionals academicians and students

discourse traditions are a key concept of diachronic romance linguistics the present manual aims to establish this approach at an

international level by assembling contributions that introduce its theoretical foundations discuss connections with alternative approaches of text and discourse analysis show the relevance of discourse traditions for the history of romance languages and explore possibilities for future applications of the concept
