straight on the financial crisis of 2008 and explained why u s growth was accelerating relative to other high wage economies he warned that loose monetary policy would produce neither growth nor inflation that expansionary fiscal policy would have no lasting benefit on growth in the aftermath of the crisis and that ill advised attempts to rein in banking based on misplaced blame would slow an already weak recovery unfortunately he was right now he s back with another provocative argument that our current obsession with income inequality is misguided and will only slow growth further using fact based logic conard tracks the implications of an economy now constrained by both its capacity for risk taking and by a shortage of properly trained talent rather than by labor or capital as was the case historically he uses this fresh perspective to challenge the conclusions of liberal economists like larry summers and joseph stiglitz and the myths of crony capitalism more broadly instead he argues that the growing wealth of most successful americans is not to blame for the stagnating incomes of the middle and working classes if anything the success of the 1 percent has put upward pressure on employment and wages conard argues that high payoffs for success motivate talent to get the training and take the risks that gradually loosen the constraints to growth well meaning attempts to decrease inequality through redistribution dull these incentives gradually hurting not just the 1 percent but everyone else as well conard outlines a plan for growing middle and working class wages in an economy with a near infinite supply of labor that is shifting from capital intensive manufacturing to knowledge intensive innovation driven fields he urges us to stop blaming the success of the 1 percent for slow wage growth and embrace the upside of inequality faster growth and greater prosperity for everyone

this paper uses historical data from the bretton woods era to analyze the effectiveness of devaluation based adjustment programs in the developing countries forty eight major devaluations undertaken between 1954 and 1971 are investigated in detail in an effort to understand the circumstances leading to these adjustment programs as well as their degree of effectiveness an important aspect of the analysis is the distinction between devaluations undertaken within the context of imf programs and devaluations implemented independently we find out that in general countries with lower income per capita and deeper economic problems tended to seek imf support with greater frequency also our analysis indicates that countries with left wing leaning governments were less likely to embark on imf programs with respect to the effectiveness of these devaluation programs our findings support the notion that devaluations accompanied by restrictive and consistent macroeconomic policies are an efficient and powerful adjustment tool our historical investigation also shows that in general countries that embarked on imf stand by programs tended to perform better than countries that adjusted on their own
