fundamental concepts in the design of experiments 5e offers comprehensive coverage
of the key elements of experimental design used by applied researchers to solve
problems in the field wide ranging and accessible it shows students how to use
applied statistics for planning running and analyzing experiments featuring over 350
problems taken from the authors actual industrial consulting experiences the text
gives students valuable practice with real data and problem solving the problems
emphasize the basic philosophy of design and are simple enough for students with
limited mathematical backgrounds to understand the authors provide extensive

coverage of the analysis of residuals the concept of resolution in fractional replications plackett burman designs and taguchi techniques sas statistical analysis system computer programs are incorporated to facilitate analysis thoroughly revised and updated this new edition includes sixty new problems focuses more on computer use adding computer outputs from statistical packages like minitab spss and jmp and emphasizes graphical procedures including residual plots and normal quantile plots ideal for various advanced undergraduate and graduate experimental methods courses taught in statistics engineering and mathematics departments this book will also appeal to professionals and researchers doing experimental work

includes solutions for all the problems in the text
