this book provides in depth presentations in membrane biology by specialists of international repute the volumes examine world literature on recent advances in understanding the molecular structure and properties of membranes the role they play in cellular physiology and cell cell interactions and the alterations leading to abnormal cells illustrations tables and useful appendices complement the text those professionals actively working in the field of cell membrane investigations as well as biologists biochemists biophysicists physicians and academicians will find this work beneficial

this book provides a comprehensive overview of the basic principles concepts techniques and latest advances in the field of biomembranes and membrane associated processes with new emerging technologies and bioinformatics tools this is a promising area for future study and research the book discusses the composition fluidity and dynamic nature of phospholipid bilayers which vary with cell organelle type and function it describes the various types of transport proteins that facilitate the transport of polar and nonpolar molecules across the membrane actively or passively via ion channels or through porins it also explores the many cellular functions membranes participate in 1 energy transduction which includes the electron transport chain in inner membrane of mitochondria and bacterial cytoplasmic membrane and photosynthetic electron transport in thylakoid membranes in chloroplast and photosynthetic bacterial membranes 2 cell cell communication involving various signal transduction pathways triggered by activated membrane receptors 3 cell cell interactions involving various types of adhesion and receptor proteins 4 nerve transmission involving opening and closing of voltage gated ionic channels and 5 intracellular transport involving the processes of endocytosis exocytosis vesicular transport of solutes between intracellular
