the papers in this volume contain results in active research areas in the theory of rings and modules including non commutative and commutative ring theory module theory representation theory and coding theory

this work is a concise introduction to spectral theory of hilbert space operators its emphasis is on recent aspects of theory and detailed proofs with the primary goal of offering a modern introductory textbook for a first graduate course in the subject the coverage of topics is thorough as the book explores various delicate points and hidden features often left untreated spectral theory of operators on hilbert spaces is addressed to an interdisciplinary audience of graduate students in mathematics statistics economics engineering and physics it will also be useful to working mathematicians using spectral theory of hilbert space operators as well as for scientists wishing to apply spectral theory to their field

this textbook introduces spectral theory for bounded linear operators by focusing on i the spectral theory and functional calculus for normal operators acting on hilbert spaces ii the riesz dunford functional calculus for banach space operators and iii the fredholm theory in both banach and hilbert spaces detailed proofs of all theorems are included and presented with precision and clarity especially for the spectral theorems allowing students to thoroughly familiarize themselves with all the important concepts covering both basic and more advanced material the five chapters and two appendices of this volume provide a modern treatment on spectral theory topics range from spectral results on the banach algebra of bounded linear operators acting on banach spaces to functional calculus for hilbert and banach space operators including fredholm and

multiplicity theories supplementary propositions and further notes are included as well ensuring a wide range of topics in spectral theory are covered spectral theory of bounded linear operators is ideal for graduate students in mathematics and will also appeal to a wider audience of statisticians engineers and physicists though it is mostly self contained a familiarity with functional analysis especially operator theory will be helpful

this proceedings volume covers a range of research topics in algebra from the southern regional algebra conference srac that took place in march 2017 presenting theory as well as computational methods featured survey articles and research papers focus on ongoing research in algebraic geometry ring theory group theory and associative algebras topics include algebraic groups combinatorial commutative algebra computational methods for representations of groups and algebras group theory hopf galois theory hypergroups lie superalgebras matrix analysis spherical and algebraic spaces and tropical algebraic geometry since 1988 srac has been an important event for the algebra research community in the gulf coast region and surrounding states building a strong network of algebraists that fosters collaboration in research and education this volume is suitable for graduate students and researchers interested in recent findings in computational and theoretical methods in algebra and representation theory

this volume dedicated to bruno j müller a renowned algebraist is a collection of papers that provide a snapshot of the diversity of themes and applications that interest algebraists today the papers highlight the latest progress in ring and module research and present work done on the frontiers of the topics discussed in addition selected expository articles are included to give algebraists and other mathematicians including graduate students an accessible introduction to areas that may be outside their own expertise
