it is undeniable that the recent revival of artificial intelligence ai has significantly changed the landscape of science in many application domains ranging from health to defense and from conversational interfaces to autonomous cars with terms such as google home alexa and chatgpt becoming household names the pervasive societal impact of ai is clear advances in ai promise a revolution in our interaction with the physical world a domain where computational intelligence has always been envisioned as a transformative force toward a better tomorrow depending on the application family this domain is often referred to as ubiquitous computing cyber physical computing or the internet of things the underlying vision is driven by the proliferation of cheap embedded computing hardware that can be integrated easily into myriads of everyday devices from consumer electronics such as personal wearables and smart household appliances to city

infrastructure and industrial process control systems one common trait across these applications is that the data that the application operates on come directly typically via sensors from the physical world thus from the perspective of communication network infrastructure the data originate at the network edge from a performance standpoint there is an argument to be made that such data should be processed at the point of collection hence a need arises for edge ai a genre of ai where the inference and sometimes even the training are performed at the point of need meaning at the edge where the data originate the book is broken down into three parts core problems distributed problems and other cross cutting issues it explores the challenges arising in edge ai contexts some of these challenges such as neural network model reduction to fit resource constrained hardware are unique to the edge environment they need a novel category of solutions that do not parallel more typical concerns in mainstream ai others are adaptations of mainstream ai challenges to the edge space an example is overcoming the cost of data labeling the labeling problem is pervasive but its solution in the iot application context is different from other contexts this book is not a survey of the state of the art with thousands of publications appearing in ai every year such a survey is doomed to be incomplete on arrival it is also not a comprehensive coverage of all the problems in the space of edge ai different applications pose different challenges and a more comprehensive coverage should be more application specific instead this book covers some of the more endemic challenges across the range of iot cps applications to offer coverage in some depth we opt to cover mainly one or a few representative solutions for each of these endemic challenges in sufficient detail rather than broadly touching on all relevant prior work the underlying philosophy is one of illustrating by example the solutions are curated to offer insight into a way of thinking that characterizes edge ai research and distinguishes its solutions from their more mainstream counterparts
